```
In [3]:  from pyspark.sql import SparkSession

         spark = SparkSession.builder \
             .master("local[*]") \
             .appName("Learning_Spark") \
             .getOrCreate()

         sc = spark.sparkContext
         book = sc.textFile("./PostHistory.xml")
         javaLines = book.filter(lambda line: "Spark" in line)
         javaLines1 = book.filter(lambda line: "Scala" in line)
         javaLines1.join(javaLines).distinct()
         javaLines1.count()
```

Out[3]:  211

Using the PostHistory file, count the number of Posts that feature the words "Spark" and "Scala". Output this to the screen. (20 points)
